

Members-only Seminar

Danny Day

founder and president of EPRIDA, on

Creating a Virtuous Circle

How new biotechnologies can increase crop yields, extract a wide range of fuels, foods, chemicals and materials from the plants themselves and sequester perhaps a third of their carbon in the soil.

13.45 for 14.00, Friday, 27th July, 2007

at the

Teagasc Ashtown Food Research Centre

In association with the University of Georgia, Eprida has developed a method of producing biofuels and valuable coproducts which also allows greenhouse gases to be removed from the air and sequestered in the soil. See www.eprida.com There is no charge for the seminar but to enable detailed discussions to take place afterwards, attendance is limited to members of Feasta and invited guests. New members may join at the door.

The Teagasc Centre is 300 metres from Ashtown station. A suitable train leaves Connolly at 13.34 and gets into Ashtown at 13.46.
